Packaging:	Watch supplied in our German manufactured twist box the same type of box used to supply a range of spare parts to the diving and offshore industry only made on a larger scale for Scurfa Watches

Operating Instructions

Correctly operating your watch it vital to maintaining the quality of the watch and movement.

- 1 Normal Position.
- 2 Hand Setting Position. Stop-second with interruption of motor impulses.

Time Adjustment:

Unscrew the crown counter-clockwise to release the crown before pulling it to position 2. Rotate the crown to adjust the time. Screw the crown clockwise to re-secure the crown & seal the watch.

EOL End of life indicator

The ETA F06.402 is a brass 3 jewel Swiss Made movement with a longer battery life and an end of life (EOL) indicator.

Care of your Scurfa watch

Cleaning your watch

We recommend you use a small soft toothbrush and mild soap, work in with the toothbrush then rinse off with fresh water.

Please check your winding crown is screwed down tight before entering water as damage caused by water entering a loose crown is not covered under warranty.

Always rinse your watch with fresh water after swimming or diving, turn the bezel to dispense of any fine particles that may build up underneath, if your bezel does become tight rinse under warm water and turn to work loose.

Strap Removal

The tolerances are tight with the Diver One spring bars and the straighter you keep the strap during removal the better, push one side in and move the strap away from the case slightly, push the pin on the opposite side in just enough to move the strap out, keep level then pull the strap downwards, extra care must be taken with the titanium models.

Strap Fitting

Put one side of the strap/spring bar into the lug, lay the other side level between the lugs, push in the spring bar pin and move the strap into position until the pins spring through the holes, I recommend putting tape on the back of the lugs and use plastic or wood to push the pin into place.

Using your Diver One in a saturation dive system

Unscrew your crown on any blowdown you may have within your saturation period, decompress your watch at the normal rate, any damage caused by rapid decompression (equipment/medical lock) is not covered under warranty.

Thank You...

Thank you for buying a Scurfa Watch, look after your watch and it will give you many years service, we have spares and endeavour to help with any problems you may experience in its lifetime we only ask you to be honest explaining any damage you may of caused.
